

THE BEST VALUE IN A **MODULATION COMBINATION** IS NOW AVAILABLE!

Choose the Goodman® GCV96 for the **BEST VALUE** in a modulating gas furnace!

For outstanding levels of indoor comfort and reliable performance, it's hard to beat a Goodman modulating gas furnace. Unlike single-speed gas furnaces a Goodman modulating gas furnace automatically calibrates the amount of heat your home needs to satisfy the thermostat setting. So when the weather is cool, you're using less fuel and energy to heat your home. When the weather is extremely cold, the modulating gas furnace automatically determines the precise amount of heat your home requires at the most energy saving level. So you save energy and get enhanced home comfort all year long!

And beyond the modulating feature, the Goodman brand GCV96 gas furnace is ComfortNet™ communicating control compatible. This system constantly monitors the performance of your home comfort system and provides valuable diagnostic and maintenance tools. Perhaps the best feature of this gas furnace is the unique heat exchanger. This dual diameter, aluminized-steel, tubular heat exchanger is recognized as one of the most durable on the market today. So when you're looking for a new gas furnace, choose the one that delivers optimal performance, outstanding reliability, and is backed by our best limited warranties.
