Builder Company Name:	Submitted By:	Office/Cell Phone Number:
-----------------------	---------------	---------------------------

NOTE:

1. If your anticipated natural gas load of the residence exceeds 320,000 BTUH, the distance from front of house to property line is greater than 30 metres or if there are unusual conditions (i.e. rock) or privately owned structures or services, please indicate this in the Comment section on Get Connected.
2. Additional information is required regarding any unusual construction conditions (i.e. rock), privately owned buried structures (i.e. well, septic system, cables) (Please include any additional information in the space provided below).
3. Please ensure that the riser location is marked on the foundation wall prior to the arrival of service installation crew.

METER LOCATION FOR RESIDENTIAL APPLICATIONS:

Please allow approximately 6 weeks from the date we receive your application, or six weeks from the foundation date. The length of time to install your service may be impacted by unusual construction conditions, permit requirements or if you are located in a “remote location”.

1. **Meter Location Measurement Provided on Application or Marked on Foundation.** For all residential applications meter location must be provided in the Service Length/Location section or marked in yellow on foundation of the dwelling prior to installation. If measurement is provided and the foundation is marked, the mark on the foundation will supersede the measurement provided. Location measurements provided on application or marked on foundation that are in conflict with required code (at the time of service installation) will be moved to a location as close to the original requested location as possible in order to mitigate clearance issues. **Any** additional piping and/or charges to relocate the gas service after the original installation are the responsibility of the requestor.
2. **Meter Location Not Provided or Not Marked on Foundation.** If meter location measurement is not provided on application or marked on foundation at the time of installation, the company meter set location shall be 2 metres back from the front corner of the dwelling (i.e. from the livable portion of the dwelling). If a clearance conflict exists at this location, the installation crew will select a location close to the company meter set location in order to mitigate clearance issues. Any additional piping and/or charges to relocate the gas service after the original installation are the responsibility of the requestor.

CONSTRUCTION HEAT

When a furnace is activated for construction heat by a G1 or G2 certificate holder, a completed “Furnace Installer Validation Form” must be completed and posted on the furnace. Union Gas will verify that a completed form has been posted during inspection visits and this is also subject to audit by TSSA. You must further ensure that no other appliances are put into use prior to inspection by Union Gas as required under Ontario Regulation 212/01 Section 7.

A supply of forms and envelopes for attachment to the furnace can be ordered free of charge by contacting the following address:
restechsupport@uniongas.com
